

North West Green Learning Journey

2 July 2019

As part of the environmental science education in our school, the Environmental Science club pupils took part in an interactive and experiential learning journey to the Bukit Panjang Community Centre.

Through this learning journey, they learnt about eco-friendly features at the Bukit Panjang Community Club and how they can help to conserve Earth's limited resources.

Guided by the enthusiastic volunteers, the Environmental Science club members had an enriching experience at the Bukit Panjang Community Club.

Members learnt about what they can do for 3Rs and had a hands-on session in sorting out the recyclables and non-recyclables.

Learning about how vertical gardening helps to lower indoor temperature and the use of solar panels to generate electricity.
